Abstract

This article emphasizes the importance of establishing a healthcare system that ensures the quality, effectiveness, and accessibility of medical assistance to the public, ultimately leading to the preservation of public health.

Key words : health storage system , average lifetime to see duration , medical help quality , efficiency , estimate financing , integration .

In the Republic health storage system reform to do measures done increase within to the population medical help show modern system formation about certain to the results achieved. Social in the field being shown services also from year to year increased is going¹

Past period village medicine points, city and village family polyclinics organize reach through primary medical and sanitary help display system improved and of the population this from services use possibilities expanded. Urgent medical help show the only one centralized system created , to citizens , including places high to technologies based on medical help showing republic specialized scientific and practical medicine centers network is being improved the population reproductive health strengthening , motherhood and childhood protection to do according to series purposeful national programs done increased _ Children's hereditary and born diseases with of birth prevention get in order to republic and territorial screening centers organize done _

As a result, in 1991-2017 common scientist indicator is 20 percent, mothers and babies death 3.1 _ equal to decreased _ Average lifetime to see duration to 1995 compared to 4.6 per year increased and today's 73.7 years per day organize is doing

That's it with together, health storage field activities organize in reaching last in years collected the rest systematic shortcoming and problems of citizens health protection to do system more to improve directed tasks efficient solution to do obstacle is doing In particular²:

first of all, health storage system manage and planning according to concept and strategic of goals there is that it is not due to this in the field reforms complete didn't happen in the form done increasing, this while of the population medical help to quality circle desire and requirements answer does not give;

secondly, health storage in the field smoothie financing system outdated, modern international to practice suitable not coming to mechanisms based on Finance _ _ of resources ineffective to be used and of the field chronic way without funding to stay take is coming

thirdly, diseases prevention to do and early identification, patronage and healthy marriage style formation according to affairs efficiency low of citizens specialized medical help asking appeal to do increase reason is happening

fourthly, to the population medical help show different degrees and stages, that's it including treatment _ and health recovery in the process unity slow developed;

fifthly, valid personnel policy medical help show all levels, especially primary _ in the joint specialists with of provision, as well as health storage system organizers and management employees of preparation prospects forecasting enable does not give;

sixthly, medical of practice education and with science integration laziness specialized of centers innovative potential low with together modern medicine achievements treatment-diagnosis to the process current to do negative influence showing;

from the seventh electron health storage in the field the only one standard there is not medical of service integration and efficient to be managed provides modern software products current not done, there is information systems and technologies scattered color have and to narrow directions intended.

To the population medical help show quality, efficiency and popularity fundamentally increase provides health storage system organize reach and of financing conceptual in terms of new model's formation, medicine science and of technologies modern achievements current reach main the goal reached placed.

the world health storage organization to the analysis according to treatment a person health 10 percent of provision factor, only. Hereditary factors 15 percent, environment 20 percent, most importantly, life style 55 percent organize is enough The coronavirus disease is also wrong marriage style heavy consequences take to come showed.

Analyzes as a result of doctors the work 60 percent of the day patients to treatment not report _ to fill spend is happening determined . Like this of circumstances prevention get in order to health storage to the system digital technologies current of doing legal the basics Create same about _ series affairs done is increasing .
