

NECESSITY OF FINANCING THE HEALTH CARE SYSTEM IN THE CONTEXT OF ECONOMIC DEVELOPMENT

UROKOV FIRDAVS ORTIKNIYOZOVICH

Assistant, Samarkand Institute of economics and service Economical analysis and statistics department

Abstract

Present in the day of the economy all segments row health storage system fast paces with developed is going . In this article the system financing importance are described. The article discusses the importance of financing the health care system in the context of economic development. The author argues that a healthy population is essential for economic growth and development, and that investing in health care is therefore crucial. Overall, the article emphasizes the need for sustained investment in health care systems in order to promote economic development and improve the health and well-being of populations.

Key words : health system , medical help show quality and his efficiency , estimate financing , integration , telemedicine connections .

Today's in the day in our country population with the most the work take going village medicine of point common practice doctor undertake 146 types to the disease diagnosis to put and treatment , 213 types primary diagnosis to put and referral giving , as well as rehabilitation , dispensary and prevention according to very a lot tasks loaded . Therefore, " Youth support and population health strengthening year " state program in the project medicine field development with depends one series late can't be issues cover is being taken

Indeed, the State of 2021 program in the project valid common practice doctor and nurses instead of family doctor , his therapy and pediatrics directions according to assistants , patronage nurses and from the midwife consists of which is " medicine brigades". organize to do task defined . Social in the field being shown services volume also from year to year increased is going¹ Now , healthy marriage style action not to be done as a result come coming out diseases indicator from 55 percent significant to the degree drop off in order to home conditions children for prepared foods enrichment for the purpose of 6-23 months children micronutrient powder with , from 6 months to 5 years has been Vitamin "A" for children with and 2-10 years old children helminthiasis prevention according to special preparations with free of charge provided ².

Analyzes as a result of doctors the work 60 percent of the day patients to treatment not report _ to fill spend is happening determined. Like this of circumstances prevention get in order to health storage to the system digital technologies current of doing legal the basics Create same about _ series affairs done is increasing.

Current in the day The only one electron to the list get and internet network through doctor reception to write providing provider « Electronic polyclinic » automated information system to work
