#### ABSTRACT

*This article talks about the importance of innovative technologies in speech training in preschool educational organizations.*

The development of our independent Uzbekistan largely depends on the formation of today's young new generation as a full-fledged, well-rounded person. Because the state is built and strengthened by people who think independently, have a perfect spirit, and have a pure language. Bringing up a mature generation in our country is a priority of state policy. The national personnel training program is the only educational complex that covers the entire process of continuous education and training of the young generation. Its first stage is pre-school education.

Based on the requirements of the Law "On Education" and the "National Program of Personnel Training", life itself demands a new development of the content and means of education. In this organizational-pedagogical process, following new principles in accordance with the laws and principles of education, the emergence of educational methods, the improvement of educational tools, especially in the organization of education, non-traditional forms of the teacher's skills are widely implementation is being observed.

A certain part of these changes came out as a part of the existing didactic approaches, while another part appeared based on the pedagogical experiences of scientists of developed countries in the world education system. It is necessary to note that the introduction of innovative pedagogical technologies into the education sector of our country is one of the areas of special attention.

Currently, the educational process is particularly interested in the training of interactive methods, innovative technologies, pedagogical and information technologies in the educational process, and one of the reasons is that it is still in traditional education to this time If the recipients are trained to acquire ready knowledge only, modern technologies teach them that they will find their knowledge independently, learn, to analyze them, to even be analyzed, to even be imagined.

The educator provides conditions for the development, formation, education, education, education, and education of the person in this process, and in the process of education becomes a key part of the person.

A modern educator is a author, manufacturer, researcher, user and propagandist of the author of the new pedagogical technologies. In the process of organizing the educational process by the modern educator, the main information and the training material in the content of the training should be provided in such a way that makes the child's ability to visually perceived.

Education Innovations, advanced pedagogical technologies, news, interactive methods of training do not depend on itself. This means that knowledge is required of the teacher, creative workshop and professional development. Because efficiency in education cannot be achieved without achieving the performance of the educator. The educator represents children, methods of educational and means, directing children, and the funny sessions of fine-discussion, and creative disputes to the proper dispute, creative disputes Inspect the arrival. In this case, the children will take the initiative, and the educator restricts their activities, to control their activities, guidance in complex situations, and their activities in complex situations, and their activities. It is possible to tasks such as assessment.

The knowledge given will be strengthened not only the help of memory, but only when the child is occupied by his own thinking. It is important to develop a child's ability to think, especially imagination, assuming, creating skills and skills. Therefore, it is advisable for each educator to use innovative technologies to ensure in-depth knowledge in their sessions. High results will be achieved in the use of modern pedagogical technologies in the transition of speech growth and the effective use of innovative technologies.

Speech growth for preschool children is done from innovative technologies, and more effective use of innovative technologies, and logically in children, and logical memory, logical memory develops.

The Law on Education requires change in the formation of children's speech, in particular, in the methodology and practice of growing children's speech. Currently, higher demands for the development of preschool speeches are being set up. Fingure to these requirements requires new research on the development of speech development.

So, the speech growth sessions are important in raising the spirituality of society, in children, to build a harmoniously developed generation, to form such as knowledge, trust, consciousness, and thinking.
